## AIR FACTORY SYSTEM

ELIMINATE PROBLEMS

IN-DOOR POLLUTION

OUT-DOOR POLLUTION

ODOUR POLLUTION

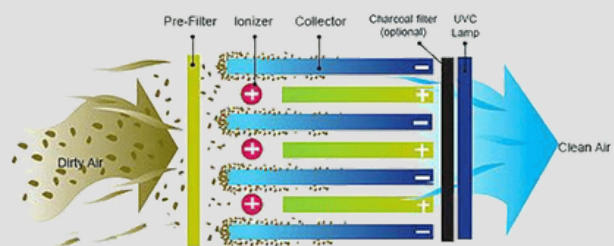

NOISE POLLUTION

CONVECTION

Air Factory System is defined as a filtration device that is used to remove fine particles like smoke and fine dust from the flowing gas. It is the most commonly used device for air pollution control. They are used in industries like steel plants, and thermal energy plants from -

### IONIZATION Theoretical

The process of liberating an electron from a gas molecule with the simultaneous production of a positive ion is called ionization. In this process, collision of a free electron takes place with a neutral gas molecule hence a new electron and positive ion is formed.

## TEST RESULT

AQI : EXCELLENT  
ODOUR : VERY WEAK  
NOISE : 60DB

AQI : EXCELLENT  
ODOUR : NONE AT ALL  
NOISE : 60DB
